

IBM CLOUD SERVICES

- Simply put, cloud computing is the delivery of computing services including servers, storage, databases, networking, software, analytics, and intelligence-over the Internet (“the cloud”) to offer faster innovation, flexible resources, and economies of scale.
- We need to have basic knowledge of the following cloud services:
 1. IBM Watson IoT Platform,
 2. Node-RED Service,
 3. Cloudant DB,
 4. TTS Service.

Application modernization

- Unlock your core applications and harness cloud-native development to become a nimble market competitor.

Automation:

- Reduce process blockers, improve IT operations, connect your apps and data, and tune network performance.

Backup and disaster recovery:

- Create a business continuity plan that includes cloud backup and disaster recovery for your critical IT systems.

Confidential computing:

- Confidential computing protects sensitive data by performing computation in a hardware-based, trusted execution environment (TEE). You gain a higher level of privacy assurance with complete authority over your data at rest, in transit and in use.

AND SO ON.....
